

Sunjo Advani

President

International Development of Technology (IDT)

Dr. Sunjo Advani is an aerospace engineer with 35 years experience in flight simulation development and operates the company International Development of Technology. Previously, as assistant professor in the Aerospace Department at the Delft University of Technology, his research focused on pilot-vehicle interactions and manual flying. Since 2001, he has focused on a related problem - Loss of Control In-Flight. In 2009, he founded the International Committee for Aviation Training in Extended Envelopes, which defined the requirements for Upset Prevention and Recovery Training. These are embodied in ICAO Manual 10011, and recent regulations, including EASA. Currently, he supports several airlines in developing their UPRT programs and applying UPRT to their pilots and instructors.
