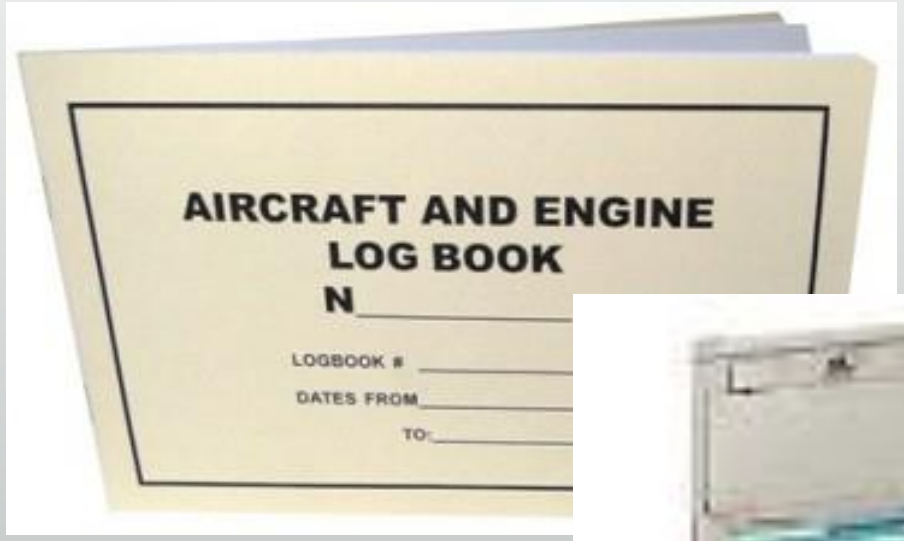
2018 Singapore Aviation Safety Seminar

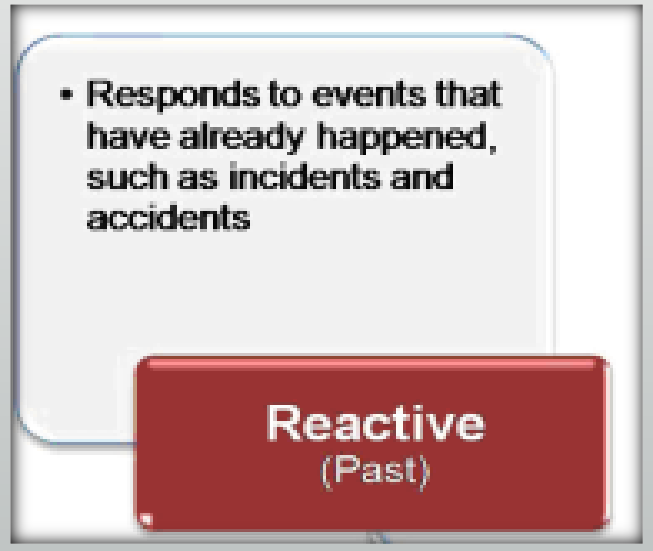
Collecting More Data to Advise Operations on the State of the Aircraft…

Joseph Barclay
Inflight Warning Systems, Inc.

Good old Days of Data…



Good old Days of Data…

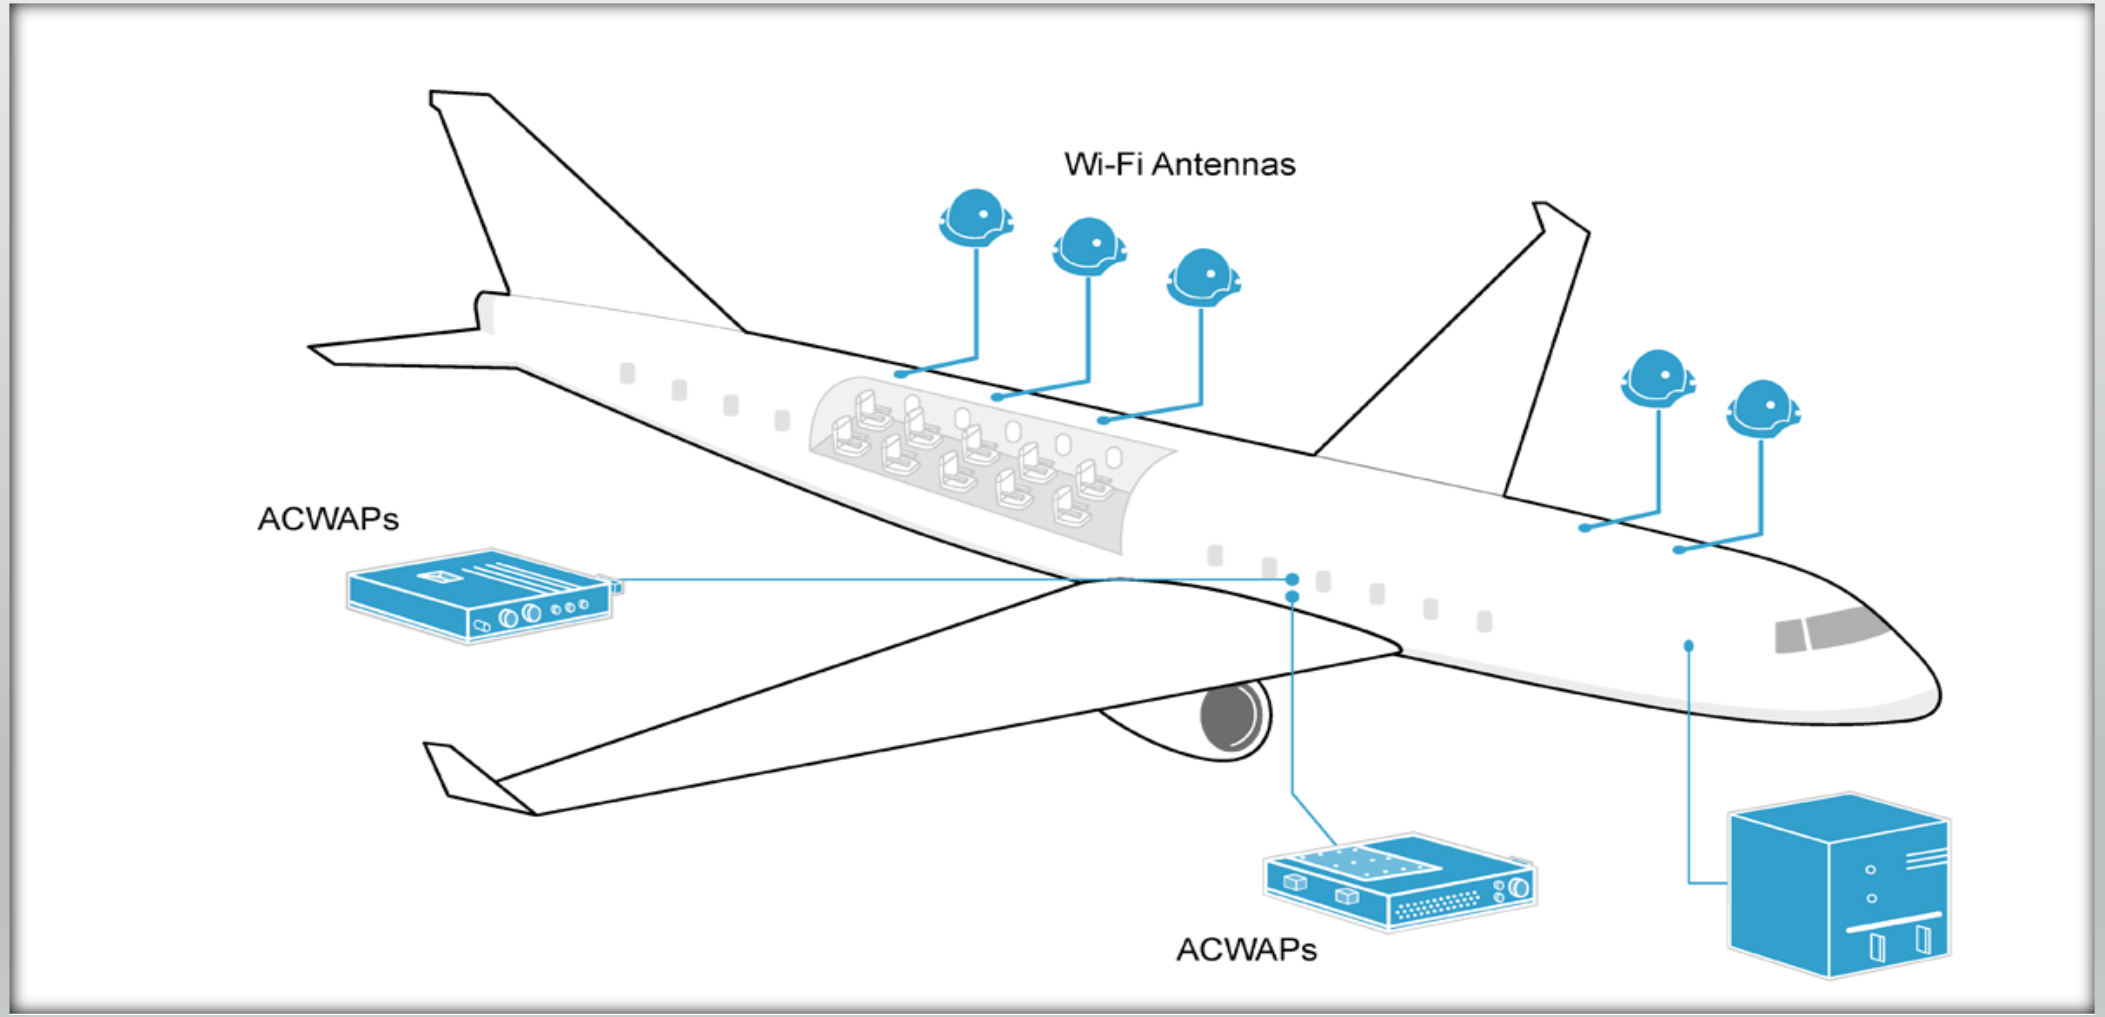


- Checked Aircraft History
- Reviewed Component History
- Research and Investigations

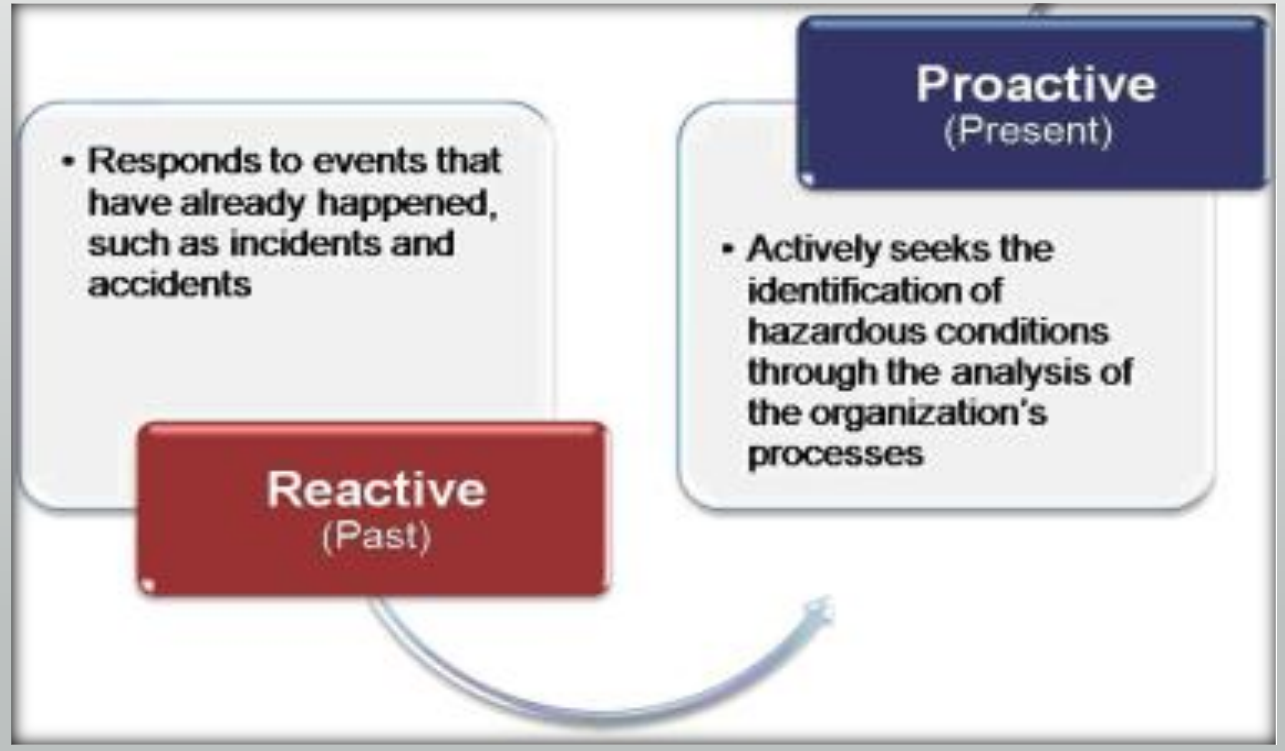
Weekend duty….

Data Automation

Data Automation



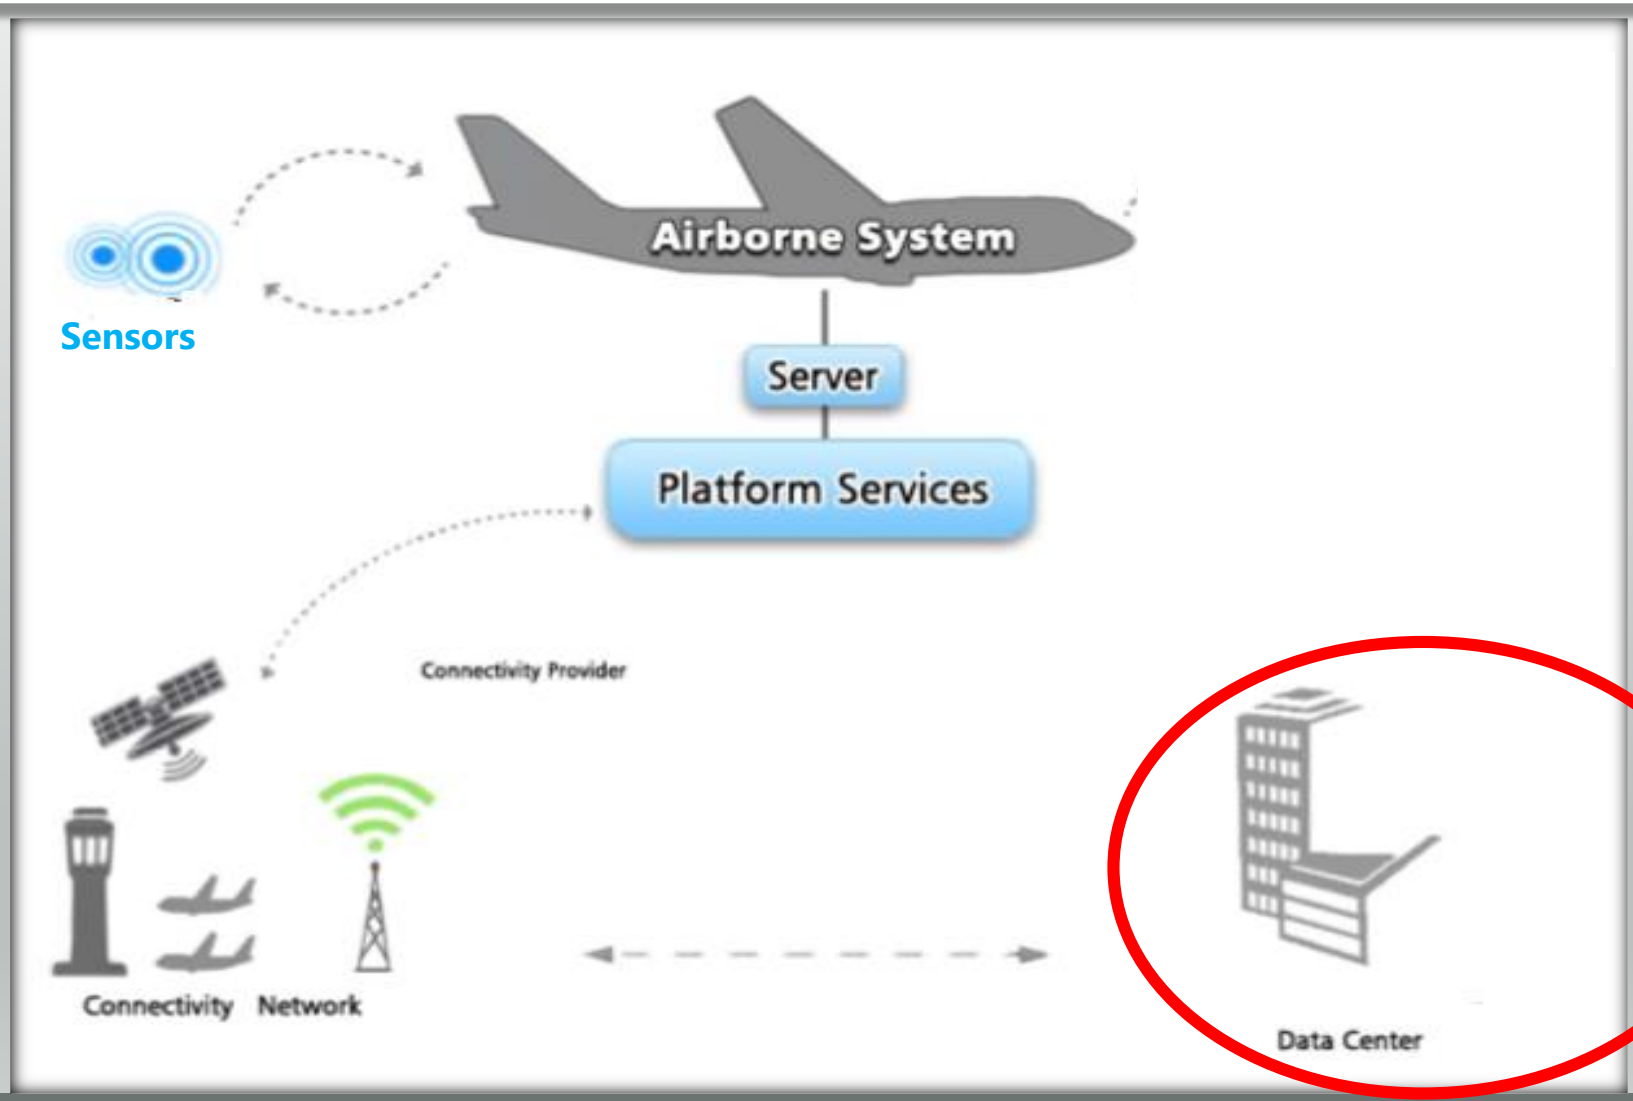
Proactive use of Data



Proactive use of Data

- Trend Monitoring
- Aircraft Health Monitoring
- MOQA
- Maintenance Forecasting
- Identification of System Variances

Smart Aircraft



Where we are today

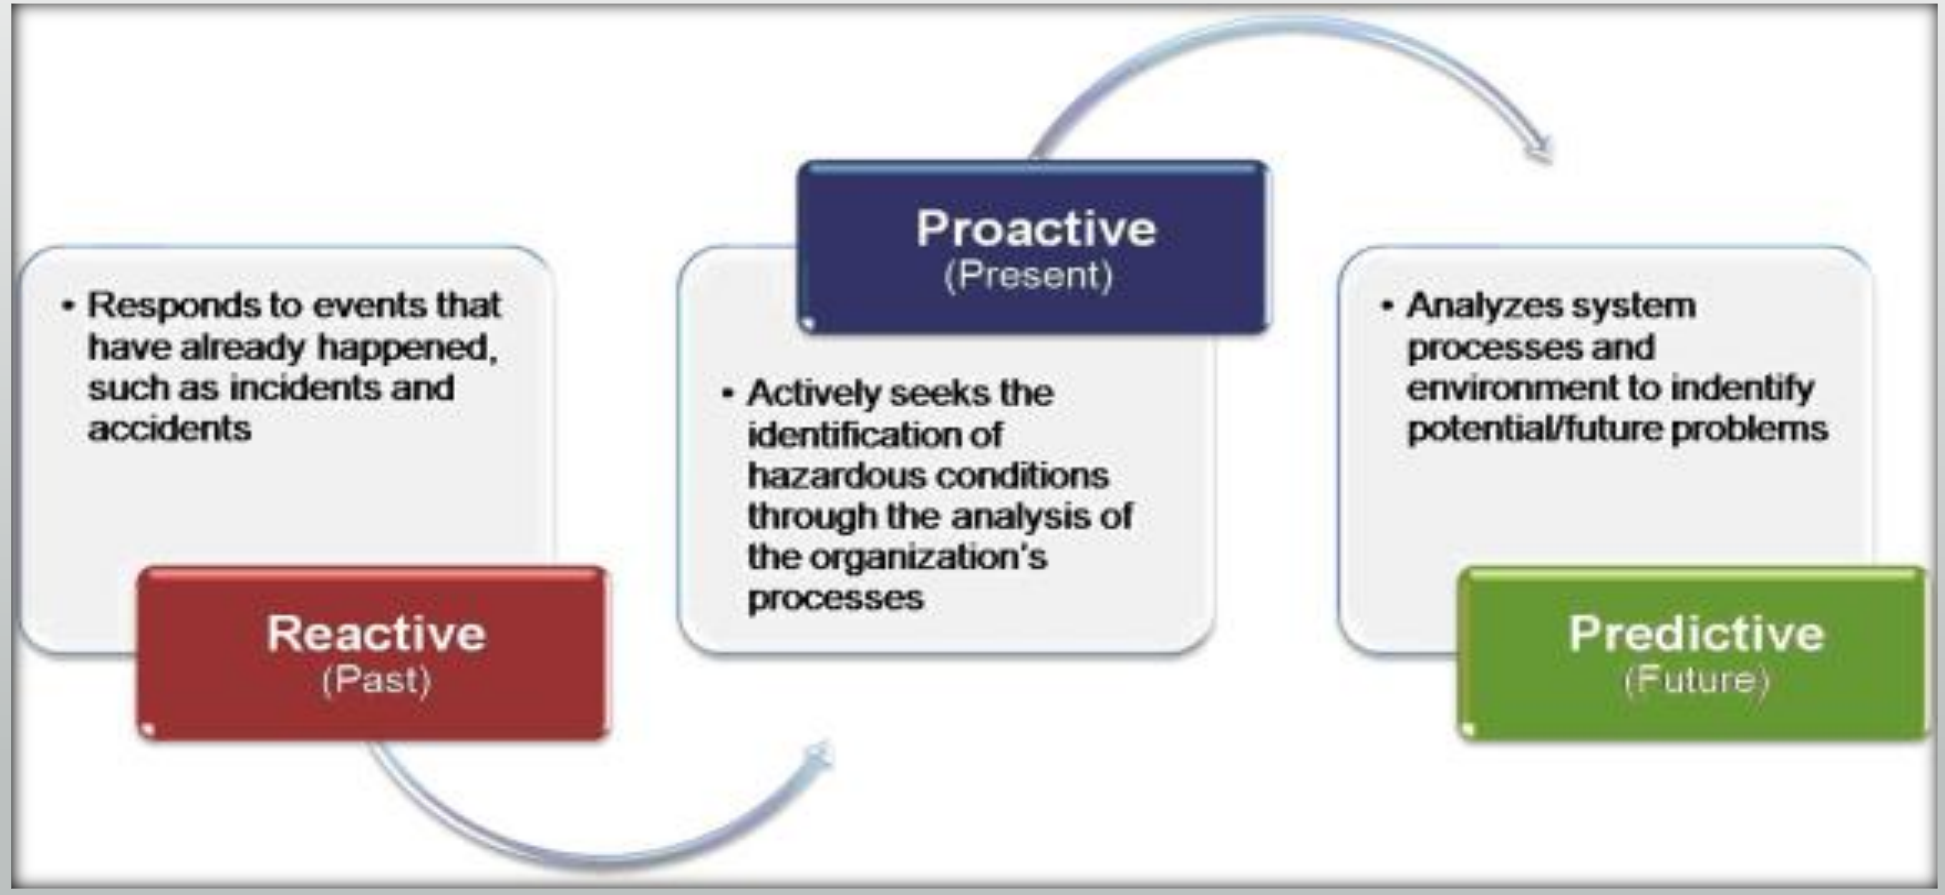
$

What's Next?

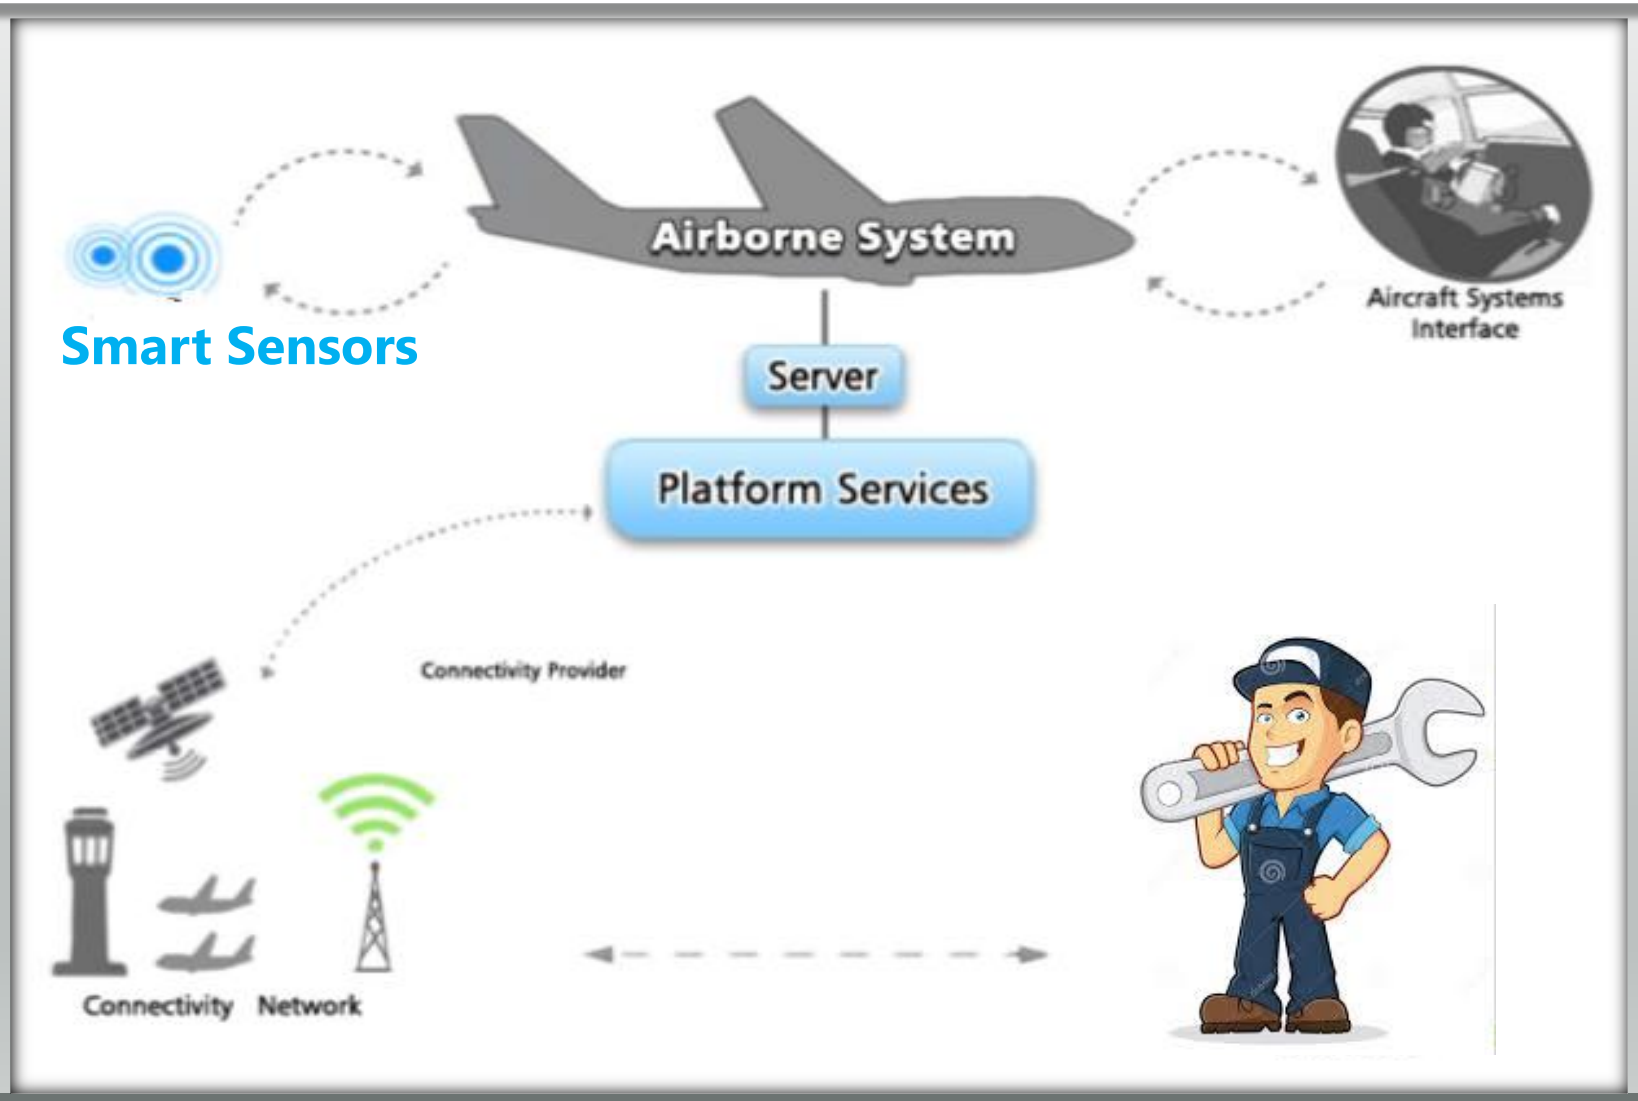
SMS Through Technology



Predictive use of Data

- Analytics built into Smart Sensors
- Eliminates need for post-data analytics
- Notification alerts sent directly to Airline Operations
- Auto response can be integrated into system mitigation

Smart Aircraft



Benefits of “Smart” Data

- Improved maintenance programs
- Improved Operational and dispatch reliability
- Reduced maintenance costs
- Reduced flight exceptions

Concerns and Limitations

- Cost of implementation – connectivity systems
- Limited data sensors
- Data / Algorithm ownership
- Data Security

Serviceability Determination & Accountability

- Predicted failure (Unserviceable vs. ‘Not yet failed’)

- Not yet unserviceable per maintenance documentation
  - Passes on-wing test limits
  - Components still within CMM limits

- Accountability
  - New test requirements and standards?
  - Who is responsible?
  - Failure to respond to predictive alerts
    - Operator vs. Regulator

THANK YOU!!
