

Looking Forward to Safety:

A WEBINAR EVENT – TWO OPTIONS FOR ATTENDING

Flight Safety Foundation is conducting research to further the integration of safety performance monitoring (SPM) into global aviation safety programs.

The Foundation is hosting **two interactive webinars** that will highlight data-driven opportunities to enhance an organization's SPM capabilities.

Participants will gain access to tools and techniques that could equip their organization to exceed SMS and regulatory basics while minimizing the level of effort. The Foundation will use the insights and best practices obtained from over a thousand participants in the Global Safety Information Project (GSIP).

Click your preferred date/time below to register for the webinar.
